

S&OP Manager

- Daily Operations management and process improvement -

We are looking for an experienced Sales & Operations Planning Manager (S&OP Manager) with knowledge about electronics manufacturing, handling NPI projects, and who enjoys being part of and managing a dynamic team.

You will be a part of the Operations department and your primary area of responsibility will be the daily management of the end-to-end supply chain with focus on customer service, order management, demand planning, forecasting, warehouse and logistics. You will refer to the Chief Operations Officer.

In your daily work you will head up a small and dynamic S&OP team but the role will also include a large part of hands-on work where you get the opportunity to interact with a wide range of customers, suppliers, and internal stakeholders.

Beside running the daily operations, we have ambitions to continuously improve processes, tools and systems to support S&OP.

The Role

- Responsibility for managing day-to-day order handling and sales administration
- Management of demand planning and delivery model and management of Stock and logistics
- Handle mass production and ramp-up of NPI projects
- Manage End-of-life products
- Manage shortage items and approval of alternative components
- Manage production capacity at EMS partners – especially electrical production test investments
- Daily management of Asian EMS partners and other suppliers
- Close collaboration with R&D Project Managers, NPI Managers, and R&D teams
- Being a part of the product maintenance team to ensure correct priorities
- Improve S&OP process and ERP solution. Define, implement processes and tools/systems and manage the change
- Specify, define, and implement Business Intelligence (BI) dashboard to support management decision making
- Define, implement, and track S&OP Key Performance Indicators (KPI)
- Make weekly management reporting and hands-on work
- Travelling is expected – primarily to Asian partners

The Qualifications

- Preferably a relevant education within supply chain or an engineering degree
- Minimum 10 years of relevant experience
- Experience with S&OP
- Experience with electronics manufacturing, PCB assembly and electrical production test
- Understanding of ERP systems – we use Navision/Business central
- Great Excel skills and experience with extraction and analysis of data
- Experience with PLM systems
- Experience with process development and implementation
- Experience with collaboration with Asian Electronic Manufacturing partners
- Experience with electronics sourcing is an advantage
- Technical understanding of R&D of electronics and electrical production is an advantage
- Fluency in the English language is required

The Individual

- Cooperative mindset and enjoy being part of dynamic project teams
- Structured and analytical approach. Ability to multitask and take the right decisions in hectic situations
- Organized way of working. Ability to change between daily tasks and strategic perspective
- Understanding of Asian culture and having a passion about what you do
